                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anotes—Topics of the poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including ECOR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The CDNA vector was adjusted to have about 60nt. The CDNA vector was acircularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by CNAyama EBES method. The CDNA vectors were obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The CDNA libraries constructed by this method are full-length enriched CDNA library."

Notes Vector: Landada Zap Express; Site_1: ECORI; Site_2:
Xho1: Myeloma cells from multiple myeloma patients' bone
marrow were purified by magnetic cell sorting. mRNA were
purified and an oligo d(T)18 primer containing XhoI
restriction site was used to prime first strand synthesis
using M-MLV reverse transcriptase. To protect the cDNAs
from Xho1 disestion in subsequent cloning step, the
nucleotide analogue 5-methyl-dCTP was added to monitor
the quantity and quality of first strand synthesis. After
second-strand synthesis and blunting of CDNA termini,
ECORI adapters were ligated, followed by kinase treatment
and digestion with Xho1. The CDNAs were then
size-fractionated using Sephacryl S-500 column and then
ligated into ECORI and XhoI digested Landad Zap Express
vector. The ligation product was packaged using digapack
II packaging extract. The library had primary titre of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EST 23-MAR-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                         This DNA sequence encodes the light chain variable region (VL) of humanised anti-CD23 (FCERII) monoclonal antibody Cl1, composed of a human framework (HSIGNII) and the light chain complementarity determining regions (see AAV3254-56) of murine antibody Cl1. The DNA was constructed by splice overlap PCR. The invention provides altered antibodies, such as chain acid sequences of the Cl1 light comprise sufficient of the amino acid sequences of the Cl1 light and heavy chain complementarity determining regions to render them capable of binding to the CD23 type II molecule expressed on haematopoietic cells. The antibodies are used to block soluble CD23 formation in human therapy, for the treatment of arthritis, lupus erythematosus, Hashimoto's thyroiditis, unlitiple solerosis, diabetes, uveitis, dermaitis, psoriasis, uriticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative collitis, Crohn's disease, Sjogren's syndrome, allergies, allergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, eczema, graft-versus-host disease, COPD, insulitis, bronchitis (particularly chronic bronchitis) or diabetes (particularly type I chatterial and B-cell malignandes (Claimed). They are also useful disease, in the province and various ligands and entering and particularly representations.
                                                                                   Cell receptor specific antibodies useful for treating {\tt e.g.} arthritis, diabetes, multiple sclerosis and psoriasis -

This invention relates to a combination of an anti-Ep-CAM (cyclic adenosine monophosphate) antibody with a chemotherapeutic agent, that is capable of arresting Ep-CAM antigen expressing cells in the synthesis (S) phase or the second growth phase (M) of cell enlargement (G2)/DNA replication. The antibody exhibits cytostatic activity and is useful in the manufacture of a medicament for use in anti-cancer therapy, characterised in that a chemotherapeutic agent, which is capable of arresting Ep-CAM antigen expressing cells in S or in G2/M, is co-administered to a patient with an anti-Ep-CAM antibody. The combination is useful for treating cancer, prostate cancer or non-small-cell lung cancer. The present sequence represents cDNA encoding the light chain of anti-Ep-CAM antibody known as humanised 323/A33 (IgG1) which can be used in the combination of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Combination for treating cancer (e.g. breast, gastric or prostate cancers), or in the manufacture of a medicament for anti-cancer therapy, comprises an anti-Ep-cyclic adenosine monophosphate antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a combination of an anti-Ep-CAM (cyclic adenosine monophosphate) antibody with a chemotherapeutic agent, that is capable of arresting Ep-CAM antigen expressing cells in the synthesis (5) phase or the second growth phase (M) of cell enlargement (G2)/DNA replication. The antibody exhibits cytostatic activity and is useful in the manufacture of a medicament for use in anti-cancer therapy, characterised in that a chemotherapeutic agent, which is capable of arresting Ep-CAM antigen expressing cells in S or in G2/M, is co-administered to a patient with an anti-Ep-CAM antigody. The combination is useful for treating cancer, particularly colorectal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Combination for treating cancer (e.g. breast, gastric or prostate cancers), or in the manufacture of a medicament for anti-cancer therapy, comprises an anti-Ep-cyclic adenosine monophosphate antibody with a chemotherapeutic agent \dot{}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ATCTCCTGTCGCTCGAGTAAGAGTCTCCTGTATAAGGATGGGAAGACATACTTGAATTGG 120

This invention describes novel polypeptide fragments (I) and the polynucleotides (II) that encode them that are highly expressed in a human bladder tumour and which have cytostatic activity. (II) are used for recombinant expression of (I) and to isolate complete genes. (I) are used to identify agents suitable for treatment of bladder cancer, to directly treat this form of cancer (including expression from gene therapy vectors) or are used in a preparation for cancer treatment. (I) is also used for the generation of specific antibodies. (II) are particular tissue type before comparison of expression patterns. This apprinciple to a significantly longer fragment of the gene to be revealed, and therefore reduces the number of failures associated with the fact that BTYs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. Ax42120Co 2x43309 represent expressed sequence tag (BST) fragments isolated from a human bladder tumour CDNA library which encode the proteins represented in AAY66143-Y66198.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The monoclonal antibody or its fragments, following the stimulation of PTHFP has the following properties: (a) inhibits intracellular elevation of CAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphateamia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHrP monoclonal antibody clone nucleotide sequence from the

its fragments, following the stimulation of PTHrP has the following properties: (a) inhibits intracellular elevation of CAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metaatasis, pain, fracture, or of compared of calcium content. The monoclonal subject of content of content of content of content of content of calcium content in fracture, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphatemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHIP monoclonal antibody clone nucleotide sequence from the

Human, parathyroid hormone related protein, PTHrP; monoclonal antibody, hypercalcaemia; rheumatoid arthritis; bone cancer; metastasis; pain; fracture; cachexia; tooth disease; periodontal disease; gingiva; sepsis; systemic inflammatory response syndrome; SIRS; hypophosphataemia; antiarthritic; cytostatic; antiinflammatory; ds.
                                  A human monoclonal antibody to parathyroid hormone related protein. useful for treating hypercalcemia, rheumatoid arthritis, cancer of bone
                                                                                                                                                            parathyroid hormone related protein (PTHrP). The monoclonal antibody or its fragments, following the stimulation of PTHrP has the following properties: (a) inhibits intracellular elevation of CAMP: (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphataemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a

human monoclonal antibody to parathyroid hormone related protein. eful for treating hypercalcemia, rheumatoid arthritis, cancer of bone
                                                                                                                                                                                                                                                                      The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHrP). The monoclonal antibody or its fragments, following the stimulation of PTHFP has the following properties: (a) inhibits intracellular elevation of CAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphateamia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHFP monoclonal antibody clone nucleotide sequence from the

A human monoclonal antibody to parathyroid hormone related protein. - useful for treating hypercalcemia, rheumatoid arthritis, cancer of bone including metastasis, and pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHrP). The monoclonal antibody or its fragments, following the stimulation of PHPP has the following properties: (a) inhibits intracellular elevation of CAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and djingiva, sepais, systemic inflammatory response syndrome (SIRS) and hypophosphatemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHPP monoclonal antibody clone nucleotide sequence from the

The monoclonal antibody or lits fragments, following the stimulation of PFHRP has the following properties: (a) inhibits intracellular elevation of cAMP: (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphataemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHTP monoclonal antibody clone nucleotide sequence from the

The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHFP). The monoclonal antibody or its fragments. Following the stimulation of PTHFP has the following properties: (a) inhibits intracellular elevation of cAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphateemia. It has antiarthritic, cytostatic and antihinflammatory activities. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A human monoclonal antibody to parathyroid hormone related protein. - useful for treating hypercalcemia, rheumatoid arthritis, cancer of bone including metastasis, and pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, parathyroid hormone related protein, PTHrP; monoclonal antibody; hypercalcaemia; rheumatoid arthritis; bone cancer; metastasis; pain; fracture; cachexia; tooth disease; periodontal disease; gingiva; sepsis; systemic inflammatory response syndrome; STRS; hypophosphataemia; antiarthritic; cytostatic; antiinflammatory; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 GATATTGTGATGACTCAGTCTCCACTCTCCCTGCCCGTCACCCTGGAGAGCCGGCCACC 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 ATCTCCTGTCGCTCGAGTAAGAGTCTCCTGTATAAGGATGGGAAGACATACTTGAATTGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHTP). The monoclonal antibody or its fragments, following the stimulation of PTHTP has the following properties: (a) inhibite intracellular elevation of cAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatonal antibody can be used in the treatment metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphataemia. It has antiarthritic, cytostatic and annihinflammatory activities. The present sequence represents a human PTHTP monoclonal antibody clone nucleotide sequence from the

The monoclonal antibody or its fragments, following the stimulation of PTHrP has the following properties: (a) inhibits intracellular elevation of cAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood

calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiva, sepsis, systemic inflammatory response syndrome (SIRS) and hypophosphatemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents and human PTHIP monoclonal antibody clone nucleotide sequence from the

useful for treating hypercalcemia, rheumatoid arthritis, cancer of bone
                                                                          The present invention describes a human monoclonal antibody to parathyroid hormone related protein (PTHFP). The monoclonal antibody or its fragments, following the simulation of PTHFP has the following properties: (a) inhibits intracellular elevation of cAMP; (b) inhibits the release of calcium from bone; or (c) inhibits elevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumatoid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingiue, sepsies, systemic inflammatory response syndrome (SIRS) and hypophosphataemia. It has antiarthritic, cytostatic and antiinflammatory activities. The present sequence represents a human PTHFP monoclonal antibody clone nucleotide sequence from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
